To the Customers of the City of Livingston Public Water system (TX1870002). Following the guidelines set by the EPA Lead and Copper Rule Revisions (LCRR), the City of Livingston has conducted an audit of the service lines for our water system, to determine the material classification for the water service lines both feeding the water meter as well as leaving the water meter.

The information gathered in this audit has been used to create an inventory list of all service lines in our system in accordance with Title 40 of the code of regulations CFR 141.85. The results of this inventory have been used to determine if the service lines are classified as Lead, non-Lead, Galvanized Required Replacement, or materials lead status unknown. The inventory has resulted in 538 service lines that meet the requirement for replacement. These service lines are classified as **UNKNOWN** or **Galvanized Required Replacement**. Notification letters are being mailed out to every service address that meets these criteria.

Any service lines listed as Lead, Galvanized Required Replacement, or materials lead status unknown will require replacement within the next **10 years** by EPA LCRR guidelines.

The City of Livingston has a proposed replacement plan of 60 service lines per budget year to meet the requirements set by the EPA.

A digital copy of the Lead Service Line Inventory (LSLI) is available to be viewed at City Hall. For any questions regarding your service line results, please contact the City of Livingston at 936-327-4311.
